

PRODUCT

Car rental and leasing software for a fleet with several branches

Self-drive and chauffeur rentals, leasing with e-signed contracts, a customer app and a driver app, on one system for every branch.

OVERVIEW

AutoTech360 Rental

AutoTech360 Rental runs a company-owned fleet across several branches. Customers find a car in your app, book it self-drive or with a driver, upload their licence and pay; your branches approve, hand over and take back cars on a tablet, with inspections, deposits and damage handled in the same place.

Leasing runs on the same system: plans with a monthly price calculator, applications with a credit check, contracts signed in the app, monthly invoices, mileage readings, renewals and buyouts. Every booking, lease, payment and car shows up in one set of reports.

BUILT FOR

- Car rental companies
- Car leasing companies
- Chauffeur and limousine services
- Airport and multi-branch rental operators
- Dealer groups with a rental or leasing arm

FEATURES

What you get with AutoTech360 Rental

01

Self-drive and chauffeur rentals

Rent by the day, week or month, self-drive or with a driver. Chauffeur bookings become trips that dispatch assigns to drivers, with overtime billed after the trip.

02

Booking approval and payment

Customers book in the app, staff approve and assign a car, and the invoice goes out with a due date. Customers pay by card in the app, by bank transfer with proof, or at the branch.

03

Pricing engine and quote simulator

Rate plans per category, seasons, extras and protection, coupons, one-way and airport fees and taxes. The simulator shows how any total is made up, and every booking keeps the price it was quoted.

04

Fleet calendar with no double bookings

Every car's bookings, holds, leases, trips and maintenance on one calendar per branch. Availability is checked by date, so the same car can never be promised twice.

05

Pickup and return on a tablet

Check-out and check-in wizards with a photo inspection, the rental agreement signed on screen, the deposit taken and fuel, mileage and late-return charges suggested at return.

06

Damage and maintenance

Damage found at return becomes a report with an estimate, a decision and a charge capped at the customer's excess. Service due dates, repairs and expiring car documents are tracked per car.

07

Lease plans and a price calculator

Plans per model with a price for each term and monthly allowance, deposit, set-up fee and buyout. Customers try terms on your website and in the app and see the monthly price with tax.

- 08 Applications and e-signed contracts**
Applications with income, documents and a credit check go to a review queue with an affordability ratio. Contracts are signed in the app with a drawn signature and a one-time code, then countersigned.
- 09 Running leases to the end**
Monthly invoices, late fees and arrears, mileage readings with an odometer photo and a projection, service requests, renewals, early termination, returns and buyouts.
- 10 Customer app and driver app**
Android and iOS apps in your name. Customers search, book, upload documents, pay and lease; chauffeurs see their trips, record the odometer and keep working without signal.
- 11 Documents for international customers**
Residents and visitors are asked for the right documents, such as a passport and an international driving permit, and staff approve or reject each one from a verification queue.
- 12 Dashboard, reports and support**
Today's pickups, returns and tasks per branch, ten reports with charts and CSV export, and support tickets that customers raise from the app about a booking or an invoice.

MOBILE APPS

A customer app and a driver app in your name

Your customers get an Android and iOS app to find a car, book, pay and lease. Your chauffeurs get their own app for the trips dispatch gives them, which keeps working without signal.

- 01 Find and book a car · Customer app · Rentals**
Search a branch and dates, self-drive or with a driver, compare the cars that are free and book with the price shown up front.
 - Free cars for the dates chosen
 - Price per day and in total
 - Documents, invoices and card payment
- 02 Lease a car · Customer app · Leasing**
Try terms and monthly allowances to see the price, apply in four steps, then sign the contract in the app.
 - Live monthly price with tax
 - Application saved step by step
 - Contract signed with a one-time code
- 03 Chauffeur trips · Driver app · Trips**
The day's trips with pickup, drop-off and the customer's number, started and ended with an odometer photo.
 - Call and open in maps
 - Odometer readings with photos
 - Works offline and sends later

Every app: Android & iOS · Your name, logo & colours · Push notifications · Card payments in the customer app.

WHY IT MATTERS

The difference it makes to your business

01

No double bookings

Availability is checked by date for every car, branch and one-way return, so a car is never promised twice.

02

Prices you can explain

Every total is broken down line by line and kept with the booking, so a quote can be reproduced exactly.

03

A faster counter

Pickups and returns follow a tablet checklist with photos, signatures and the deposit, so nothing is skipped.

04

Fewer unpaid invoices

Invoices have due dates, payment proofs wait in a queue for finance, and lease instalments can be charged to a saved card.

05

Rental and leasing together

One fleet, one customer record and one set of invoices for short rentals and multi-year leases.

06

Know which cars earn

Utilisation and profitability per car, revenue by self-drive, chauffeur and leasing, and costs of maintenance and damage.

HOW WE DELIVER

How we deliver AutoTech360 Rental

01

Set up branches and countries

We add your branches with their currency, timezone, taxes, opening hours and the documents each kind of customer must show.

02

Load your fleet and prices

Cars, models and photos, rate plans, seasons, extras, fees, coupons and lease plans are set up and checked in the quote simulator.

03

Brand the apps and website

The customer app, the driver app and the public website carry your name, and contract templates are prepared for your lawyer to review.

04

Train the branches

Counter staff, fleet, finance and leasing teams learn their screens, each with their own role and two-factor sign-in.

05

Launch the apps

We help you publish both apps on the App Store and Google Play and stay on hand as the first bookings and leases come in.

FAQ

Questions about AutoTech360 Rental

What is car rental software?

Car rental software runs a rental fleet: bookings and prices, which car is free when, pickup and return with inspections, deposits, damage and invoices. AutoTech360 Rental also covers chauffeur trips and long-term leasing.

Does it handle leasing as well as rentals?

Yes. Lease plans, applications, credit checks, contracts signed in the app, handover, monthly invoices, mileage, renewals, early termination, returns and buyouts all run on the same fleet and customer records as rentals.

Can customers book on our website?

Customers book in the app. The website shows your cars with prices, the lease calculator, your branches and how to get the app, so it sends visitors to the app to book.

How do customers pay?

By card in the app, with saved cards and automatic payment for lease instalments, by bank transfer with the proof uploaded in the app, or at the branch. Finance staff verify transfers before a booking is confirmed.

Do you support chauffeur-driven rentals?

Yes. A booking with a driver becomes trips that dispatch assigns from a board that warns about clashes. Drivers run each trip from the driver app, and overtime and expenses are billed after it.

Can it work for international customers and several countries?

Customers can be of any nationality, with international phone numbers, passports and international driving permits. Each branch belongs to a country that sets its currency, timezone and taxes, so adding a country is configuration rather than new software.

How are lease contracts signed?

The customer reads the contract in the app and signs with a drawn signature and a one-time code. Staff countersign, and the final PDF is fingerprinted and comes with an audit record of who signed, when and from which device. Have your lawyer review the contract template before going live.

Is it available in Arabic?

The system is in English today. Every text in the apps, website, emails and PDFs goes through translation files, so other languages such as Arabic can be added as part of your set-up.

How much does it cost?

It depends on the number of branches and cars, whether you need chauffeur service and leasing, and how much branding and customisation you want. After a free demo you get a fixed quote, with no hidden extras.
