

SERVICE

Mobile App Development for Automotive Businesses

Customer, staff and driver apps for automotive businesses: start from our ready-made apps or build one around your process.

OVERVIEW

Mobile App Development

We build iOS and Android apps for automotive businesses: apps your customers use to book, buy and track, and apps your staff use on the showroom floor, in the workshop or behind the wheel.

Many clients start from our ready-made apps in their own name and colours: the DMS apps for sales, service and the workshop, the Fleet driver app, and customer and driver apps for rental, car wash, roadside assistance and taxi. When your process does not fit a product, we build a custom app around it.

BUILT FOR

- Car dealerships and dealer groups
- Service centres and workshops
- Rental and leasing companies
- Car wash and detailing centres
- Towing and roadside assistance firms
- Taxi operators and fleet managers

FEATURES

What you get with Mobile App Development

01

Custom app builds

Android and iOS apps designed around your own workflow, from the first screens to release in the App Store and Google Play.

02

Ready-made apps in your name

Our customer and driver apps for rental, car wash, roadside assistance and taxi, published with your name, logo and colours.

03

Apps for staff and drivers

Apps for sales executives, service advisors, technicians and drivers, like the three AutoTech360 DMS apps and the Fleet driver app.

04

Works offline

Apps that keep working without a signal and send updates when the phone reconnects, as the DMS apps and the Fleet driver app do.

05

Connected to your systems

Bookings, orders and payments land in your DMS, CRM or back office through APIs, so nobody re-keys data.

06

Payments and live tracking

Built-in payment integration and live tracking for orders, services, rides and tow trucks.

07

Notifications and messaging

Push notifications, reminders and WhatsApp or SMS messages keep customers informed at each step.

- 08 English and Arabic**
Apps in English and Arabic with right-to-left layouts where your customers need them.
- 09 Publishing and support**
We handle store submission, updates for new Android and iOS versions, monitoring and fixes after launch.

WHY IT MATTERS

The difference it makes to your business

- 01 Manage the business on the go**
Stay in touch with customers and the services they need, wherever you are.
- 02 Instant access to key data**
See inventory, service requests and customer preferences in real time, at any time.
- 03 Simpler workflows**
Centralise tasks, notifications and data in one place to make day-to-day management easier.
- 04 Stronger customer engagement**
Give customers quick access to your services and a smoother way to communicate with you.

HOW WE DELIVER

How we deliver Mobile App Development

- 01 Discover**
We map who will use the app, what they need to do and the systems it must connect to, then recommend a ready-made app or a custom build.
- 02 Design**
Screens and user flows are designed and clicked through with your team before development starts.
- 03 Build and connect**
We develop the Android and iOS apps and the back office, and connect them to your existing systems.
- 04 Test and publish**
Apps are tested on real devices, then submitted to the App Store and Google Play under your name.
- 05 Support and improve**
After launch we monitor crashes and usage, keep the apps current with new OS versions and add features as you grow.

Questions about Mobile App Development

How quickly can a ready-made app go live?

Usually within days to a few weeks: we add your branding, settings and content, then submit the apps to the stores. A custom app typically takes 3 to 9 months, depending on scope.

Should we choose a ready-made app or a custom build?

If one of our products covers most of your process, start with it and add custom features later. Choose a custom build when your workflow is unusual or the app is central to how you compete.

Will the apps work with my existing systems?

Custom apps connect to your current systems, such as dealer management, CRM or fleet software, through their APIs, so orders and bookings arrive where your team already works. Our ready-made apps work on their own, so you can launch without changing the systems you use.

Who owns the app?

Ready-made apps are licensed, with updates and support included. Depending on the app, it runs on your own server or cloud or is hosted by us. For custom builds, the source code and IP of the bespoke work are transferred to you.

What support do you provide after launch?

We provide ongoing support, including updates for new Android and iOS versions, fixes, monitoring and guidance, so your app keeps working as phones and stores change.
